SYSTEM DEVELOPMENT

GIS-IT Applications & System Development
System Integration
Telemetric Monitoring & Decision Support System for Management

GIS-IT Application & System Development

Leveraging cutting-edge ideas, knowledge, and technology to reimagine location for GIS application services and business solutions.

System Integration

Streamline workflows and propel digital transformation using corporate integration and data interoperability to update processes, technologies, capabilities, and cost efficiency across many platforms.

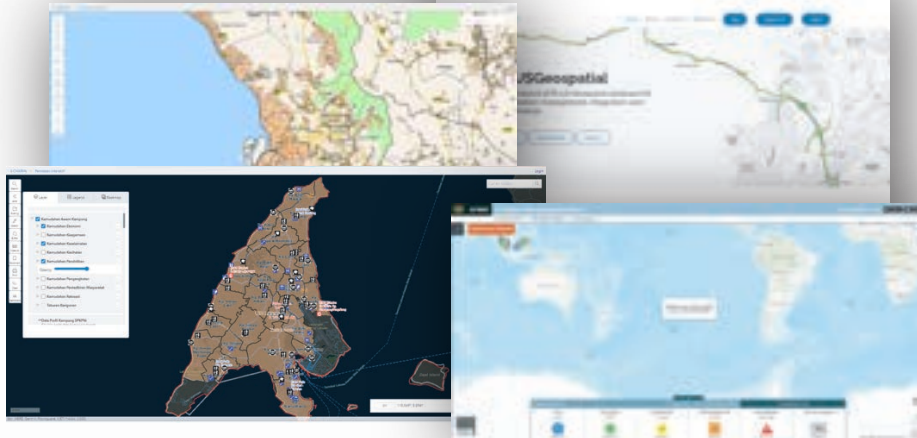

Telemetric Monitoring & Decision Support System for Management

Spatialworks has environmental monitoring services together with system development & integration. Our team is experienced in integrating sensors to a developed system with real-time data capturing & monitoring.

Applications:

- River/Marine Water Quality Monitoring
- Air Quality Monitoring
- Water Level Monitoring
- Noise/Vibration Monitoring

Spatial Analytics and Business Intelligence (BI)

To explore, find, and improve data and turn raw data into valuable information by utilize a set of intuitive analysis and smart mapping.

GIS Project Management & Consulting

Our team work hard to support and manage a project's scope, schedule, and budget by utilising proven approaches that support business objectives and give long-term advantages to the organisation.

Spatial Data Management Solutions and GIS Cloud

Collecting, managing, improving, sharing, and giving GIS data the ability to make decisions and enhance efficiency across the organisation.
